Introduction to Linux II – Chapter 13 Exam Answers 2019 + PDF file

1. **By mistake, a user sends a file to print on a remote printer. The best course of action is:**
   - Stop printer service immediately
   - Ask the administrator to switch off the printer
   - **Delete the document if the print document is still in the queue**
   - Call up the remote location and have them reject the print job from the printer controls

2. **A system administrator wants to make few changes to the CUPS server configuration. Changes should be made in which of the files?**
   - *classes.conf*
   - ***cupsd.conf***
   - *snmp.conf*
   - *printers.conf*

3. **Refer to following section from the CUPS configuration file and identify the correct statement.**

```
Order Allow,Deny

Allow gsource.com

Deny uk.gsource.com
```

   - Only the *allow* statement is valid
   - Allow access to all hosts in the *gsource.com* subdomain, but exclude those that are in the *uk.gsource.com* domain
   - Allow access to all hosts in the *gsource.com* domain and *uk.gsource.com* subdomain
   - **Allow access to all hosts in the *gsource.com* domain, but exclude those that are in the *uk.gsource.com* subdomain**

4. **The */etc/cups/printers.conf* file contains three printer entries. What should Joe do so that everyone uses the HP1600 printer by default?**
   - Delete DeviceURI for all other printers
   - **Specify the DefaultPrinter directive for the HP1600 printer**
   - Remove all other printer entries except for the HP1600 printer
   - Set HP1600 as the local printer

5. **The */etc/cups/classes.conf* file is used by the *cupsd* daemon for:**
   - Storing the class of the default printer
   - **Storing the list of available local printer classes**
   - Counting the maximum number of client connections
   - Sharing printers

6. **CUPS can only be administered by:**
   - Remote Printers
   - **Root User and members of the group specified in the SystemGroup directive**
   - Depends on Allow, Deny directives
   - No administration options are available

7. **What is the outcome of running the command** lpadmin –d lpicprinter**?**
   - **Printer *lpicprinter* becomes the default printer**
   - Deletes printer *lpicprinter*
   - Enables printer *lpicprinter*
   - Printer *lpicprinter* is added

8. **Which of the following statements regarding *cupsd* is FALSE?**
   - Uses other processes for printing, monitoring and providing web interfaces
   - By default it runs as a daemon
   - Implements IPP operations and attributes
   - **Runs as multi-threaded server process**

9. **A system administrator needs to find out the number of copies of a confidential document printed by a particular user. Which of the following log files should he view for the information?**
   - *cupsd.conf*
   - *access_log*
   - *error_log*
   - ***page_log***

10. **Identify the correct command to view the status of all printers:**
    - lpq –a
    - lpr
    - lpq
    - lpq –P hpfloor1

11. **CUPS stands for:**
    - **Common UNIX Printing System**
    - Common User Printing System
    - Co-managed UNIX Printing System

- Current User Printing System

12. **CUPS retains the print job in the queue even after it is printed.**

    True or False?

    - True
    - **False**

13. **Which of the following changes is NOT possible by modifying various settings in the CUPS configuration file?**

    - Allow access from the specified host
    - Port to listen for printer information packets
    - Maximum number of copies that a user can print per job
    - **Maximum number of printers that can be configured**

14. **While the printer *testprinter* was printing a job and had several others in the queue, Joe runs the command** lpadmin –x testprinter**. The effect of the command is:**

    - **All choices are valid**
    - Printer *testprinter* gets deleted
    - All pending jobs in the queue are deleted
    - Current job is aborted

15. **Which of the following options when used with *cupsd* ensures that *cpusd* runs as a foreground process detached from the controlling terminal?**

    - –F
    - –c
    - –t
    - –f

16. **Every print job stored in the */var/spool/cups* directory has:**

    - **One control file and one or more data files**
    - Multiple control and data files
    - One data file and one or more control files
    - One control file and one data file

17. **Which of the following functions is NOT provided by the printer service?**

    - Queuing the print jobs
    - Scheduling jobs for printing
    - Accepting print requests from multiple users
    - **Economizing use of the printer cartridge**

18. **A printer's status cannot be offline just because it has run out of paper.**

    True or False?

    - True

- **False**

19. **Internet Printing Protocol (IPP) is a network protocol that supports which of the following?**
    - All confidentiality, authentication and access control
    - Access control only
    - **Both authentication and access control**
    - Authentication only

20. **Which of the following statements about CUPS Print Queues is correct?**
    - Works only for locally connected printers
    - Cannot be added using the lpadmin command
    - **Supports another CUPS printer server on the network**
    - Does not support Windows-based print servers

21. **Use of which of the following options for the** lpadmin **command will enable the printer and make it ready to accept jobs?**
    - –p
    - –d
    - –x
    - **–E**

22. **A user reports to the system administrator that when printing a Japanese web page, he gets junk characters. Which of the following settings should the system administrator check in the CUPS configuration file?**
    - *BrowseAllow*
    - *BrowseLang*
    - *BrowsePort*
    - ***DefaultLanguage***
